

Strategic Decisions - Detailed

Company: NexaTech Solutions

Document: Strategic Decisions - Q2 2026

Key Decisions Required:

1. Infrastructure Scaling Strategy

- Option A: Continue scaling PostgreSQL with read replicas.
- Option B: Move to distributed NoSQL (Cassandra/DynamoDB).
- Considerations: cost, consistency, engineering effort.

2. Deployment Strategy

- Option A: Kubernetes (high scalability, complex).
- Option B: Docker Compose + CI/CD (simpler, less scalable).
- DevOps leaning toward Kubernetes for long-term benefits.

3. AI Knowledge System

- Proposal: build internal RAG system for company knowledge.
- Sources: Slack, Notion, Google Drive.
- Benefits: reduce repeated questions, faster onboarding.

4. Observability Stack

- Choose between Datadog, Grafana stack, or custom solution.
- Need unified logs, metrics, and traces.

5. Team Structure

- Proposal: shift from functional teams to cross-functional squads.
- Goal: improve ownership and reduce communication overhead.

Risks:

- Overengineering infrastructure too early.
- Resistance from teams due to process changes.

Next Steps:

- Assign evaluation owners for each decision.
- Conduct cost-benefit analysis.
- Finalize decisions by end of Q2.
